Professional Summary

I am a software developer with experience building full-stack web applications, Python automation systems, Telegram bots, and cross-platform mobile applications. I have built scalable systems, intelligent automation, and business-focused digital products using modern web and mobile technologies. I am experienced in integrating APIs, designing efficient workflows, and developing systems that reduce manual work while supporting business growth and solving real-world problems.

Experience

Independent Software Developer

2024 – Present:

- Designed and developed full-stack cross platform applications using modern JavaScript and Python technologies.
- Built automation systems for workflow optimization using Telegram APIs and Python.
- Engineered ADB Hydra, a multi-device wireless Android debugging framework.
- Developed CampusHUB, a scalable student engagement platform currently under active development & maintenance.
- Built CLI tools to automate software project initialization and development workflows.
- Worked with REST APIs
- Managed software deployment and maintenance
- Developed automation solutions for businesses

Education

Ekiti State University: *2021 – Present*

B.Sc Computer Science

Technical Stack

- **Languages:** Python • JavaScript • TypeScript • HTML5 • CSS3 • C/C++ (Arduino) • SQL
- **Frameworks & Runtimes:** React Native • Node.js • Express • Arduino IDE
- **Tools & Infrastructure:** Git • GitHub • Linux • iOS & Android Builds (Deployments)
- **Specialized Expertise:** REST APIs • AI Prompting & Engineering • Process Automation • Telegram Bot Architecture • Embedded Systems & Robotics

Projects

CampusHUB: <https://campushub-connect.onrender.com>

Developed a full-stack student-focused digital ecosystem to connect students & campus communities combining social networking, content distribution, and business opportunities into a unified platform designed for scalable campus communities with future expansion to national and international markets.

Telegram Automation Platform: https://t.me/glamour_rbot

Developed a python automation tool integrating Telegram APIs to automate messaging, workflow management, and repetitive manual operational tasks – also handled transactions that generated over 150k in a single month with minimal human input.

ADB Hydra: local build available for test on demand

Designed and developed an intelligent multi-device Android Debug Bridge (ADB) Wi-Fi management system featuring automatic device discovery, persistent connections, and self-recovery mechanisms – This feature helps with easy development and test of applications.

ValuXchange: <https://valuexchange.vercel.app>

Built this project of an exchange service hub as an extension of the existing company to streamline digital asset exchange and financial transactions for local and international users.

Some other projects cannot be included here due to third party privacy policies and signed NDA Agreements.

Marketing Experience

Digital Growth & Marketing

- Planned and executed social media growth strategies
- Generated and nurtured online leads
- Built marketing funnels
- Managed content distribution
- Applied analytics to improve campaign performance

Core Competencies

Software Engineering

- Python Workflow Automation
- Rest API Integration
- Telegram Bot Engineering
- Mobile Application Development
- Full-Stack Web Development

Professional Experience

- Independent Software Development
- Digital Growth & Marketing

Growth & Marketing

- Digital Marketing
- Community Build-Up and Management
- Lead Generation
- SEO

Product Development

- Technical Writing
- Product Strategy & Architecture
- UI/UX Collaboration
